Abstract. Let $K$ be the field of rational functions in 2 variables over an algebraically closed field $k$ of characteristic 0. Let $D$ be a finite dimensional $K$-central division algebra whose ramification divisor on the projective plane over $k$ is a singular cubic curve. It is shown that $D$ is cyclic and that the exponent of $D$ is equal to the degree of $D$. 

**Abstract.** Let $K$ be the field of rational functions in 2 variables over an algebraically closed field $k$ of characteristic 0. Let $D$ be a finite dimensional $K$-central division algebra whose ramification divisor on the projective plane over $k$ is a singular cubic curve. It is shown that $D$ is cyclic and that the exponent of $D$ is equal to the degree of $D$.
