Module MA3427, Michaelmas Term 2014 Preparing for Examination

David R. Wilkins

March 26, 2015

The examinable material for the examination paper on MA3427 at the Annual Examination 2015 is as follows:—

- Section 3 (Product and Quotient Topologies), excluding subsection 3.5 (Finite Cartesian Products of Compact Topological Spaces).
- Sections 4 to 7.

The examination will be a bookwork examination (more so than in 2013), covering the results, proofs and examples discussed in the specified sections of the lecture notes.

Note that the final question in Section A of the 2013 examination (i.e., the question involving quaternions) was based on material not included in the module as taught in Michaelmas Term 2014.
