

Instructions for submitting your program for grading

Please note that the following also applies to all Homeworks in this course.

To submit your programs for grading, execute the command
`submit-work`

on any of the mathematics computers and follow the instructions.

Eg: Upon typing `submit-work` you will be asked to enter the course and problem set number to be submitted. For this course this will **always** take the form: 161:x , where x represents the number of the problem being submitted and is always given at the top of the assignment sheet.

To compile and run your programs

The command to generate an executable called `p01` from a source file `p01.c` is:

```
gcc -o p01 p01.c
```

Work submitted must be your own. Do not copy anybody else's work and submit it as yours. Do not allow anybody else to copy your work to submit as their own. If two or more people submit identical or close copies of programs, then no marks can be given to any of the people involved.

It is your responsibility to make sure that nobody can copy your work even without your permission. To prevent unauthorized copying execute the following commands once:

- Make sure nobody except you can write to your own directory:

```
cd
chmod go-rwx .
```

- Make a special subdirectory of your main login directory in which to write and test your programs.

```
cd
mkdir 161
chmod go-rwx 161
```

- Create and write all your homework programs in the directory "161" which was created in the last item. To move into this directory the command is:

```
cd 161
```

To move back to your login directory, the command is

```
cd
```
