the European Mathematical Society website
(http://www.emis.de/journals/short_index.html)

Mission Statement

- To provide an Irish forum for the publication of good quality research in pure and applied mathematics;
- To provide a focal point for the research interests of Irish mathematicians and for international research related to their interests;
- To constitute a contribution by the Royal Irish Academy and, more generally, the island of Ireland, to promote and develop mathematics.

Submissions

Submissions are particularly welcome from those whose work is related to that of Irish mathematicians or to the work of the members of the Editorial Board. All submissions are refereed. E-mail submissions to Submissions@ria.ie

Editors

Professor Thomas J. Laffey, National University of Ireland, Dublin
Professor Gerard J. Murphy, National University of Ireland, Cork

Editorial Board

Professor David H. Armitage, Queen's University of Belfast
Professor R. M. Aron, Kent State University, USA
Professor J. Dias da Silva, University of Lisbon, Portugal
Professor Seán Dineen, National University of Ireland, Dublin
Professor Michael A. Hayes, National University of Ireland, Dublin
Professor Martin L. Newell, National University of Ireland, Galway
Professor Anthony G. O'Farrell, National University of Ireland,
Maynooth, Co. Kildare
Professor J. Zemánek, Academy of Sciences, Warsaw, Poland

Published in 2005

Cyclicity and unicellularity of the differentiation operator on Banach spaces of formal power series

by B. Yousefi and A. I. Kashkuli

Homothetic motions in semi-Euclidean \mathbb{E}_2^4

by L. Kula and Y. Yayli

On some centre-like subsets of rings

by Howard E. Bell and Abraham A. Klein

Trivial units in RG

by Jürgen Ritter and Sudarshan K. Sehgal

Generalisations of Mergelyan's inequality

by Violeta Morari

Strong approximate continuity properties of certain conjugate functions

by J. B. Twomey

Soluble groups with an automorphism inverting many elements

by P. V. Hegarty

Cotype and nonlinear absolutely summing mappings

by D. M. Pellegrino

On the symmetrisation of nonholonomic jets

by Miroslav Kureš

Minimal completely decomposable groups

by Lutz Strümgmann

On ideals of generalised invertible elements in Banach algebras

by R. M. Brits, L. Lindeboom and H. Raubenheimer

Irreducible representations of Hilbert C^* -modules

by Ljiljana Arambasic

Some spectral properties of the non-self-adjoint Friedrichs model operator

by Alexander Kiselev

The homology of Heisenberg Lie algebras over fields of characteristic two

by Emil Sköldbberg

On the efficiency of a dual to ratio-cum-product estimator in sample surveys

by Housila P. Singh, Rajesh Singh, Mariano Ruiz Espejo, M. Delgado Pineda and Saralees Nadarajah

Trace formulae associated with the polar decomposition of operators

by M. Chō, T. Huruya and C. Li

Forthcoming in 2005**Supercyclic and hypercyclic non-convolution operators on Hilbert–Schmidt entire functions**

by Henrik Petersson

Bloch’s theorem for algebroid multifunctions II

by Dominique Guillot and Thomas Ransford

Every weakly sequentially hypercyclic shift is norm hypercyclic

by Juan Bés, Kit C. Chan, and Rebecca Sanders

Harte theorem for Waelbroeck algebras

by Antoni Wawrzyńczyk
