## 1S1 Tutorial Sheet 5<sup>1</sup>

# 12 January 2007

#### Useful facts:

• Taylor Series: for a function f(t) the Taylor expansion about t=0 is given by

$$f(t) = f(0) + f'(0)t + \frac{1}{2}f''(0)t^2 + \frac{1}{6}f'''(0)t^3 + \frac{1}{24}f^{(4)}(0)t^4 + O(t^5)$$
 (1)

where  $O(t^5)$  means terms where all the powers of t are  $t^5$  and higher. Another way of puttin this is

$$f(t) = f(0) + f'(0)t + \frac{1}{2}f''(0)t^2 + \frac{1}{6}f'''(0)t^3 + \frac{1}{24}f^{(4)}t^4 + \dots + \frac{1}{n!}f^{(n)}t^n + \dots$$
 (2)

so the nth term is  $\frac{1}{n!}f^{(n)}t^n$  and n! is n factorial,

$$n! = n(n-1)(n-2)(n-3)\cdots 1 \tag{3}$$

with, for example,  $5! = 5 \times 4 \times 3 \times 2 \times 1 = 120$ . More generally the expansion about a point t is given by

$$f(t+h) = f(t) + f'(t)h + \frac{1}{2}f''(t)h^2 + \frac{1}{6}f'''(t)h^3 + \frac{1}{24}f^{(4)}(t)h^4 + O(h^5)$$
 (4)

• The Growth Equation is

$$\frac{df}{dt} = rf \tag{5}$$

with f(0) usually given as an initial condition. The solution is then

$$f(t) = f(0)e^{rt} (6)$$

• The main property of the **exponential** is

$$\frac{d}{dt}e^t = e^t \tag{7}$$

and e = 2.71828183.

• The Taylor expansion of the exponential can easily be calculated because the exponential can be differentiated easily and

$$e^x = 1 + x + \frac{1}{2}x^2 + \frac{1}{6}x^3 + \frac{1}{24}x^4 + \dots + \frac{1}{n!}x^n + \dots$$
 (8)

<sup>&</sup>lt;sup>1</sup>Conor Houghton, houghton@maths.tcd.ie, see also http://www.maths.tcd.ie/~houghton/1S1

• If a bank offers an interest rate of r, so for 4% r = .04 and adds your interest n times a year, then if you start with P your total after one year is

$$T = \left(1 + \frac{r}{n}\right)^n P \tag{9}$$

and after t years  $T = \left(1 + \frac{r}{n}\right)^{nt} P$ 

• The relationship between the growth equation and the growth of money is explained by

$$\lim_{n \to \infty} \left( 1 + \frac{r}{n} \right) = e^r \tag{10}$$

## Questions

The numbers in brackets give the numbers of marks available for the question.

- 1. (2) What is the Taylor expansion of  $\sqrt{1+x^2}$  about x=0 up to  $O(x^4)$ , that is you can stop after the  $x^3$  terms.
- 2. (2) What is the Taylor expansion of  $1/x^2$  about x = 1 up to O(4); hence work out f(1+h) to  $O(h^4)$  where  $f(x) = 1/x^2$ .
- 3. (2) Solve

$$\frac{dy}{dt} = -5y\tag{11}$$

where y(0) = 8.

4. (2) Using the chain rule calculate f'(x) where

$$f = e^{x^2} \tag{12}$$

and

$$f = \frac{1}{1 + \exp(x)} \tag{13}$$

## **Extra Questions**

The questions are extra; you don't need to do them in the tutorial class.

- 1. Find the Taylor expansion of  $\exp(-x)$  about x = 0.
- 2. Find the first three terms of the Taylor expansion of  $x \exp(x)$
- 3. The limit as  $x \to -\infty$  of  $\exp(x)$  is zero, for  $f(x) = \exp(-1/x)$  find f'(0) and f''(0).
- 4. Solve

$$\frac{dy}{dt} = 3y\tag{14}$$

where y(0) = 2.

5. What is

$$\lim_{n \to \infty} \left( 1 + \frac{r}{n} \right)^{nt} \tag{15}$$
