1. (1) Show that $T^{ab}S_b$ is a tensor, where T and S are tensors.

Solution: So, since they are tensors, if

$$x^a \rightarrow x^{a'} \quad (1)$$

then

$$\begin{aligned} T^{ab} &\rightarrow T^{a'b'} = A_a^{a'} A_b^{b'} T^{ab} \\ S_a &\rightarrow S_{a'} = A_a^{a'} S_a \end{aligned} \quad (2)$$

hence

$$T^{ab}S_b \rightarrow T^{a'b'}S_{b'} = A_a^{a'} A_b^{b'} T^{ab} A_b^c S_c \quad (3)$$

but we know that

$$A_b^{b'} A_b^c = \delta_b^c \quad (4)$$

so

$$T^{ab}S_b \rightarrow T^{a'b'}S_{b'} = A_a^{a'} T^{ab}S_b \quad (5)$$

as required.

2. (1) Show that $T^{(ab)}V_{[a|c|b]}$ vanishes, where T and V are tensors.

Solution: Well, remember that

$$V_{[a|b|c]} = \frac{1}{2}(V_{abc} - V_{cba}) \quad (6)$$

and so $V_{[a|b|c]} = -V_{[c|b|a]}$. Furthermore

$$T^{(ab)} = \frac{1}{2}(T^{ab} + T^{ba}) \quad (7)$$

and $T^{(ab)} = T^{(ba)}$. Thus

$$T^{(ab)}V_{[a|c|b]} = -T^{(ab)}V_{[b|c|a]} \quad (8)$$

¹Conor Houghton, houghton@maths.tcd.ie, see also <http://www.maths.tcd.ie/~houghton/442.html>

and changing dummy indexes and then using the symmetry of $T^{(ab)}$

$$T^{(ab)}V_{[a|c|b]} = -T^{(ba)}V_{[a|c|b]} = -T^{(ab)}V_{[a|c|b]} \quad (9)$$

3. (1) Show that $T^{ab}{}_e = T^{abc}{}_d \delta_c^d$ is a tensor.

Solution: So, this is very long to write out, but here goes, under

$$x^a \rightarrow x^{a'} \quad (10)$$

we have

$$T^{abc}{}_d \rightarrow T^{a'b'c'}{}_{d'} = A_a^{a'} A_b^{b'} A_c^{c'} A_d^{d'} T^{abc}{}_d \quad (11)$$

Thus

$$T^{abd}{}_e \rightarrow T^{a'b'd'}{}_{e'} = A_a^{a'} A_b^{b'} A_d^{d'} A_e^{e'} T^{abc}{}_d = A_a^{a'} A_b^{b'} A_{e'}^e T^{abd}{}_e \quad (12)$$

where we have used

$$A_c^{d'} A_d^{d'} = \delta_c^d \quad (13)$$

Alternatively, observe that δ_a^b is a tensor, say $T_a^b = \delta_a^b$ in some coördinate system, then under a coördinate transformation

$$T_a^b \mapsto T_{a'}^{b'} = A_a^{a'} A_b^{b'} T_a^b = A_a^{a'} A_b^{b'} \delta_a^b = A_a^{a'} A_a^{b'} = \delta_a^{b'} \quad (14)$$

Thus, the Kronecker delta is a tensor. The contraction and multiplication properties of tensors can now be invoked.

4. (1) Show that $T^{ab} = -T^{ba}$ in one coördinate system implies that $T^{a'b'} = -T^{b'a'}$ in another coördinate system.

Solution: Well

$$T^{a'b'} = A_a^{a'} A_b^{b'} T^{ab} \quad (15)$$

and hence

$$T^{b'a'} = A_b^{b'} A_a^{a'} T^{ba} \quad (16)$$

then changing the dummy indices and then using the antisymmetry of T we have

$$T^{b'a'} = A_b^{b'} A_a^{a'} T^{ba} = -A_b^{b'} A_a^{a'} T^{ab} = -T^{a'b'} \quad (17)$$

Solution: Well

$$T^{a'b'} = A_a^{a'} A_b^{b'} T^{ab} \quad (18)$$

and hence

$$T^{b'a'} = A_b^{b'} A_a^{a'} T^{ba} \quad (19)$$

then changing the dummy indices and then using the antisymmetry of T we have

$$T^{b'a'} = A_b^{b'} A_a^{a'} T^{ba} = -A_b^{b'} A_a^{a'} T^{ab} = -T^{a'b'} \quad (20)$$

5. (3) Write $\triangle f$ in two-dimensional polar coordinates using the torsion free metric connection..

Solution: So,

$$\triangle f = D_a D^a f = D_a \partial^a f \quad (21)$$

where we have used the fact that f is a scalar. Now, from the formula for the covariant derivative

$$\triangle f = \partial_a \partial^a f + \Gamma_{ab}^a \partial^b f \quad (22)$$

Hence, we need to work out the connection coefficients with the up index equal to the first down index. Now, for polar coordinates

$$ds^2 = dr^2 + r^2 d\theta^2 \quad (23)$$

or

$$[g_{ab}] = \begin{pmatrix} 1 & 0 \\ 0 & r^2 \end{pmatrix} \quad (24)$$

and

$$[g^{ab}] = \begin{pmatrix} 1 & 0 \\ 0 & 1/r^2 \end{pmatrix} \quad (25)$$

Using the fact that this is diagonal, we have

$$\begin{aligned} \Gamma_{rr}^r &= \frac{1}{2} g_{rr,r} = 0 \\ \Gamma_{r\theta}^r &= \frac{1}{2} g_{rr,\theta} = 0 \\ \Gamma_{\theta\theta}^\theta &= \frac{1}{2r^2} g_{\theta\theta,\theta} = 0 \\ \Gamma_{r\theta}^\theta &= \frac{1}{2r^2} g_{\theta\theta,r} = \frac{1}{r} \end{aligned} \quad (26)$$

So the only nonzero entry is $\Gamma_{r\theta}^\theta$ and so we conclude

$$\triangle f = \frac{\partial^2}{\partial r^2} f + \frac{1}{r^2} \frac{\partial^2}{\partial \theta^2} f + \frac{1}{r} \frac{\partial}{\partial r} f \quad (27)$$

6. (3) Show that torsion is a tensor.

Solution: So,

$$\det g_{a'b'} = \det (A_a^{a'} A_{b'}^{b'} g_{ab}) = (\det A_a^{a'})^2 \det g_{ab} \quad (28)$$

Solution: So, to recall, the transformation property of the connection coefficients is

$$\Gamma_{bc}^a \rightarrow \Gamma_{b'c'}^{a'} = A_{b'}^b A_{c'}^c A_a^{a'} \Gamma_{bc}^a - A_{b'}^b A_{c'}^c (\partial_b A_c^{a'}) \quad (29)$$

Now, torsion is the anti-symmetric part of the connection

$$T_{bc}^a = \frac{1}{2} (\Gamma_{bc}^a - \Gamma_{cb}^a) \quad (30)$$

Using the transformation law above, this means that

$$\begin{aligned} 2T_{b'c'}^{a'} &= A_{b'}^b A_{c'}^c A_a^{a'} \Gamma_{bc}^a - A_{b'}^b A_{c'}^c (\partial_b A_c^{a'}) - A_{c'}^c A_{b'}^b A_a^{a'} \Gamma_{cb}^a + A_{c'}^c A_{b'}^b (\partial_c A_b^{a'}) \\ &= A_{b'}^b A_{c'}^c A_a^{a'} 2T_{bc}^a + A_{c'}^c A_{b'}^b (\partial_b A_c^{a'}) - A_{b'}^b A_{c'}^c (\partial_c A_b^{a'}) \end{aligned} \quad (31)$$

Now, expanding out the notation,

$$\partial_b A_c^{a'} = \frac{\partial^2 x^{a'}}{\partial x^b \partial x^c} \quad (32)$$

is symmetric in b and c , this allows us to cancel the two non-tensor terms in the transformation law, proving the result.

7. (1) Find the transformation law for $\det g_{ab}$.

Solution: So

$$\det g_{a'b'} = \det (A_a^{a'} A_{b'}^{b'} g_{ab}) = (\det A_a^{a'})^2 \det g_{ab} \quad (33)$$

8. (3) Show that $\nabla_a g^{bc} = 0$ for a torsion free metric connection.

Solution: First, from the Leibnitz rule

$$\nabla_a (g^{bc} g_{cd}) = \nabla_a \delta_d^b$$

$$= (\nabla_a g^{bc}) g_{cd} + g^{bc} \nabla_a g_{cd} \quad (34)$$

and $\nabla_a g_{cd} = 0$ for a metric connection. Furthermore, since g^{bc} is defined as the inverse of g_{cd} we must be assuming that the metric is invertible and so, we need only to show $\nabla_a \delta_d^b = 0$. From the action of the covariant derivative on a (1,1) tensor we know

$$\nabla_a \delta_d^b = \partial_a \delta_d^b + \Gamma_{ae}^d \delta_b^e - \Gamma_{ab}^e \delta_e^d \quad (35)$$

but, the first term is zero since the delta is constant and the other two terms cancel.
